

Antiviral disinfectant guide for businesses

The purpose of this guide is to produce some clarity when selecting and using antiviral products which are available, how they meet the standards and why the contact time is important.

During our visits to businesses carried out since the beginning of the pandemic, we have observed there is some general confusion about the organism Covid-19, what it is and what are suitable disinfectants that will kill the virus. We have also found in many cases, the product is suitable but the instruction for use are not being followed and consequently the product is ineffective.

Therefore, we have produced a list of products that are suitable for killing the Covid-19 virus, together with useful information on how long the product must be left on the surface before wiping clean. Please remember that although we have tried to ensure all the product information is accurate, we cannot offer an absolute guarantee. However, wherever there has been lack of detail about the product, we have been in touch with the manufacturer to confirm the details and therefore we believe all the information in the tables below is accurate and correct.

The virus is capable of surviving in the environment on surfaces, for example, wood, plastic, glass and cardboard, from between 24 hours and 9 days, therefore, regular and effective cleaning and disinfection is crucial in the control of the virus.

When looking for a suitable product, if the product includes mention of compliance with BS EN 14476 this confirms the product to be effective against viruses such as Covid-19. Products listed here must be used at the recommended dilution rate and contact time to be effective. Viricidal products should be used in high traffic areas to mitigate any risk of transmission of the disease.

Look for the BS EN on the bottle. This is usually displayed on the label and can be located on the front or on the back of the product

We have compiled a list of cleaners which are proven effective and the recommended contact time for the products to be effective. Contact details are also supplied for ease of use. There are also products listed which have other uses and could help solve problems not previously considered.

Please remember when choosing a product:-

- Pay attention to the contact time for it to be effective and kill the virus. Longer contact times may not be practical for regular, and rapid cleaning requirements such as high traffic including touchpoints, door handles, or situations where staff do not have time to leave the product on the surface for 5 minutes. Choose one with a shorter contact time
- Make sure you and your staff follow the instructions for the product chosen.
- If your chosen product needs to be diluted before use, make sure you use the correct dilution level.
- Supervise staff to make sure they don't cut corners.
- Remind staff regularly to clean down surfaces, touch points, etc. properly, use the right product, and following the instructions.
- If you wish to choose a product not on this list, you are free to do so, but you must ensure that it is effective against coronavirus

Antiviral Cleaners

Chemical name	Supplier	Compliance	Contact time	QTY	Dilution	Contact details	Product
Byotrol	Shorrock Trichem	BS EN 14476	30 seconds	750ml	Ready to use	01942 875325
