

Updates from Lantern Academy...

The arrival of our eggs!

We have been anticipating the arrival of our eggs and incubator for a little while but the time has come!

We have been learning about life cycles, food chains, habitats and caring for animals so we are looking to put our knowledge to the test by bringing animals to life in our classroom.

The children are very excited for one of the eggs to hatch. They were amazed when we held the eggs up to the light and they got a glimpse of the chick embryo inside. The wait might be a painful one but these children are eager to look after the chicks and witness them grow and gain feathers.

Outdoor Provision and Forest School Renovation

We have had scaffolding up around our school since early in the Autumn term which is finally being removed at the start of May. We are desperate to begin developing our outdoor provision!

Since Autumn, we have been trying to give our Forest School a face lift and the children have played a huge part in this transformation; raking bark, making a bug hotel, weeding and planting vegetables in our raised beds, carrying logs and rolling tyres. We are excited to see how spring and summer brings colour and life to these areas.
